FOREWORD

This volume is coming out as the Proceedings of the twelfth Winter School on abstract analysis, held at Srní in the Bohemian Weald from the 15th till the 29th of January, 1984. The papers published here are the contents of the lectures delivered there (with the exception of that of prof. Kesel'man). Unluckily, it is not quite faithful picture of the lectures held at the School: many nice ones and some series of these are missing, having not been shaped into papers by their authors. Also the open problems presented at the School have remained still unrecorded.

We thank all the participants of the School who took part in its scientific work especially to those, who presented lectures and problems there. We owe another thank to those, who have sent their contribution to this Proceedings.

We acknowledge with pleasure our indebtedness to the Faculty of Mathematics and Physics of the Charles University of Prague for organizing the Winter School, to the Mathematical Institute of the Czechoslovak Academy of Sciences and to the Union of Czechoslovak Mathematicians and Physicists for helpful cooperation, as well as to Circolo Matematico di Palermo for publishing this volume.

We are also obliged to those who have helped us to organize this scientific meeting and to publish this Proceedings, namely to prof. Benedetto Bongiorno.

The organizing board
of the 12th Winter School
