CONTENTS

Preface	9
Plenary lectures:	
J. H. BRAMBLE: On the approximation of eigenvalues of non-selfadjoint operators	15
J. DESCLOUX: Finite elements and numerical stability	21
W. N. EVERITT; M. GIERTZ: On limit-point and separation criteria for linear differential expressions	31
N. N. JANENKO: On some problems of the theory of the difference schemes	43
E. MAGENES: Problèmes de frontière libre liés à certaines questions d'hydraulique	51
L. MARKUS: On a theorem of Brunovský for periodic optimal control (lecture was not delivered)	59
M. SOVA: Abstract semilinear equations with small parameter	71
E. A. VOLKOV: On two-sided difference methods for ordinary differential equations	81
Lectures presented in sections:	
<i>A. Ordinary differential equations:</i>	
F. M. ARSCOTT: Orthogonal bipolynomial	91
P. BRUNOVSKÝ: Generic one-parameter flows on the torus and bifurcations of periodic orbits	99
C. CORDUNEANU: Some differential equations with delay	105
M. GREGUŠ: Three-point boundary value problem in a differential equation of the third order	115
F. NEUMAN: Oscillation in linear differential equations	119
M. RÁB: Periodic solutions of $\dot{x} = f(x, \dot{x})$	127
G. R. SELL: The geometric theory of Volterra integral equations	139
V. ŠEDA: On a nonlinear boundary value problem of higher order	145
M. ŠVEC: Some remarks on the asymptotic equivalence	155
<i>B. Partial differential equations:</i>	
S. FUČÍK; J. NEČAS: Spectral theory of nonlinear operators (delivered by NEČAS)	163
G. W. HEDSTROM: The accuracy of Dafermos' method for nonlinear hyperbolic equations	175
J. KRÁL: Regularity of potentials and removability of singularities of solutions of partial differential equations	179
V. LOVICAR: Criteria for almost periodicity and some applications to differential equations	187
V. N. MASLENNIKOVA: The asymptotic behavior at the large time of solutions of some mathematical physics problems	189
O. VEJVODA; I. STRAŠKRABA: Periodic solutions to abstract differential equations	199
I. VRKOČ: An optimal control problem for Itô stochastic equations	205
<i>C. Numerical methods and applications:</i>	
J. BRILLA: Variational methods in mathematical theory of viscoelasticity	211
G. CAPRIZ: A model for phenomena of instability	217
I. HLAVÁČEK: On finite element procedures of high order accuracy for parabolic equations	225
I. MAREK: Relaxation lengths and nonnegative solutions in neutron transport	227
J. A. NITSCHKE: Interior error estimates of projection methods	235
T. POPOVICIU: Application de la théorie des fonctions convexes d'ordre supérieur à l'étude de certains procédés d'intégration numérique des équations différentielles	241

M. PRÁGER; J. TAUFER; E. VIHÁSEK: Some new methods for numerical solution of initial value problems (delivered by Práger)	247
K. REKTORYS: Application of the Ritz method to the solution of parabolic boundary value problems of arbitrary order in the space variables	255
J. R. WHITEMAN; R. E. BARNHILL: Finite element methods for elliptic mixed boundary value problems containing singularities (delivered by Whiteman)	261
M. ZLÁMAL: Curved elements in the finite element method	269
A. ŽENÍŠEK: Hermite interpolation in simplexes in the finite element method	271
List of communications presented in sections	279
General time schedule	283
