CONTENTS

PLENARY LECTURES

Brezzi F., Marini L.D., Pietra P.: On some recent results on the numerical problems in semiconductor device simulation	9
Brilla J.: On analysis of quasihyperbolic equations of linear viscoelasticity	18
John O., Stará J.: On the regularity and non-regularity of elliptic and parabolic systems	28
Kiguradze I.: On some boundary value problems for systems of nonlinear ordinary differential equations	37
Kirchgässner K.: Nonlinear surface waves under external forcing	47
Schwabik Š.: Generalized ordinary differential equations - a survey	59
Uraltseva N.N.: Oblique boundary value problems for nonlinear parabolic equations	71

LECTURES PRESENTED IN SECTIONS

Ordinary differential equations

Chow S.-N., Palmer K.J.: The accuracy of numerically computed orbits of dynamical systems	74
Conti R.: On centers of type A and B of polynomial systems	77
Greguš M.: On the third order nonlinear ordinary differential equation	80
Jaroš J., Kusano T.: Nonoscillation theorems for a class of neutral functional differential equations of arbitrary order	84
Knobloch H.-W.: A new view of center manifolds	88
Krasnoselsky M.A., Pokrovsky A.V., Semenov M.E.: Stable periodic oscillations in systems with monotonous hysteresis nonlinearity	92
Lasota A.: Perturbed discrete time dynamical systems	96
Maslowski B.: Stability and averaging properties of stochastic evolution equations	100
Ráb M., Kalas J.: Stability and asymptotic properties of dynamical systems in the plane	103

Rachůnková I.: Multipoint boundary value problems at resonance	106
Reizinsh L.: Theory of completely integrable equations	110
Schneider K.R.: Relaxation oscillations in systems with different time scales	114
Šeda V.: On a boundary value problem with general linear conditions	118
Šimša J.: Linear perturbations of differential systems with constant matrices	123
Švec M.: Solutions to a differential inclusion of order n	127
Szulkin A.: Hamiltonian systems with periodic nonlinearities	131
Vanderbauwhede A.: Subharmonic bifurcation in equivariant systems	135
Vosmanský J.: Differential equations, higher monotonicity and principal pair of solutions	139

Partial differential equations

Anzellotti G.: Functionals depending on curvatures and surfaces with curvature measures	143
Bojarski B.: Some geometric aspects of Sobolev spaces	146
Doppel K.: On the floating body problem	151
Drábek P.: Solvability and bifurcations of some strongly nonlinear equations	155
Evans W.D., Lewis R., Saitó Y.: Finiteness of bound states of general N -body operators	159
Fila M., Filo J.: Blow up for a nonlinear degenerate parabolic equation	163
Franců J.: Homogenization and correctors for nonlinear elliptic equations	167
Hansen W., Hueber H.: The Dirichlet problem for sublaplacians on nilpotent Lie groups- geometric criteria for regularity	171
Kačur J.: Solution of nonlinear degenerate elliptic-parabolic systems in Orlicz-Sobolev spaces	175
Koshelev A.I., Chelkak S.I., Chistyakov V.M.: On regularity of solutions to some problems of mathematical physics	180
Krejčí P.: Partial differential inequalities as equations with hysteresis	183

Luckhaus S.: Pressure jumps in the dam problems	187
Quittner P.: Stability of stationary solutions of parabolic variational inequalities	191
Ruf B.: On the nodal set of eigenfunctions	195
Simader C.G.: The Helmholtz decomposition and the weak Neumann problem in L^q	199
Souček J.: Singular lines in liquid crystals	202
Tesei A., Natalini R.: On a class of scalar conservation laws with locally unbounded solutions	204
Wallin H.: Dirichlet's problem on a snowflake	208

Numerical methods and applications

Albrecht J.: Eigenwertaufgaben mit Funktional-Differentialgleichungen	212
Arcsott F.M.: On the solvability of the non-homogeneous potential problem at a corner singularity	214
Axelsson O.: Condition number estimates for elliptic difference problems with anisotropy	218
Bakhvalov N.S., Knyazev A.V.: A new iterative algorithm for solving the fictitious fluxes method problems for elliptic equations	225
Berger H., Warnecke G., Wendland W.: On the coupling of finite elements and boundary elements for transonic potential flow computations	228
Bock I., Lovíšek J.: The optimal control problem in coefficients for the pseudoparabolic variational inequality	232
Collatz L.: Numerical calculations for some types of boundary value problems with unbounded domains	236
Descloux J., Maillard P.: An electromagnetic free-boundary problem	240
Fazekas F.: Remarks to chaotic vibration in nonlinear dynamical systems of technics	243
Feistauer M., Ženíšek A.: Finite element solution of nonlinear elliptic equations with discontinuous coefficients and approximations in Sobolev-Slobodeckij spaces	248
Grossmann Ch.: Quasi-Newton updates in ROW-methods for avoiding Jacobians	252
Hlaváček I.: Domain optimization in axisymmetric elliptic problems	256

Holodniok M., Kubiček M.: Numerical aspects of computation of periodic and quasiperiodic solutions in systems of partial differential equations	260
Hřebíček J., Polcar P.: Numerical modelling of tube fixing in the heat exchanger of a nuclear power plant	265
Kozel K.: Some remarks to numerical solution of the Euler and Navier-Stokes equation	271
Lazarov R.D., Pehlivanov A.I.: Local superconvergence analysis of the approximate boundary-flux calculation	275
Lin Qun: Extrapolation of finite element solutions on non-uniform quadrilateral meshes	279
Martensen E.: Uniqueness of the Rothe method for the Burgers equation with piecewise continuous initial data	281
Milner F.: A finite element method for a model of population dynamics with spatial diffusion	285
Neustupa J.: The global solvability to the equations of motion of viscous gas with an artificial viscosity	289
Práger M., Taufer J., Vitásek E.: Transfer of boundary conditions for two-dimensional problems	293
Raviart P.-A.: On the mathematical and numerical modelling of electron beams	297
Vanmaele M., van Keer R.: On an internal approximation of a class of elliptic eigenvalue problems	301
Whiteman J.R., Goodsell G.: Some features of the nodal recovery of gradients from finite element approximations which produces superconvergence	305
List of invited speakers	309

Titles of invited lectures not included in this volume

- Everitt W.N.: Legendre-type differential equations and orthogonal polynomials
 Goerisch F.: Bounds to eigenvalues for eigenvalue problems arising in hydrodynamic stability theory
 Jäger W.: Symmetry breaking in semilinear elliptic problems
 Janovský V., Marek I., Plecháč P.: Numerical analysis of the bifurcation phenomena
 Kuznetsov Yu.A.: Domain decomposition methods for parabolic problems
 Meister E.: Modern Wiener-Hopf methods in diffraction theory^{*)}
 Pultar M.: Spectral element approximation of partial differential equations of 4th order
